Osteoarthritis (OA): **No radiographic evidence of OA for either hip.**

Cavitation/Other Findings: No cavitation present.

Interpretation

Distraction Index (DI): The laxity ranking is based on the hip with the greater laxity (larger DI). In this case the DI used is 0.38.  
OA Risk Category: The DI is between 0.31 and 0.49. This patient is at mild risk for hip OA.  
Distraction Index Chart:

**BREED STATISTICS:** This interpretation is based on a cross-section of 644 canine patients of the MINIATURE POODLE breed in the AIS PennHIP database. The gray strip represents the central 90% range of DIs (0.29 - 0.76) for the breed. The breed average DI is 0.49 (solid square). The patient DI is the solid circle (0.38).

**SUMMARY:** The degree of laxity (DI = 0.38) falls within the central 90% range of DIs for the breed. This amount of hip laxity places the hip at a mild risk to develop hip OA. **No radiographic evidence of OA for either hip.**
